

Panel Installation instruction on Sliding Door (Wood Collection)

Step # 1

Set the frame square by taking the measures of both diagonals. The measures must be identical.

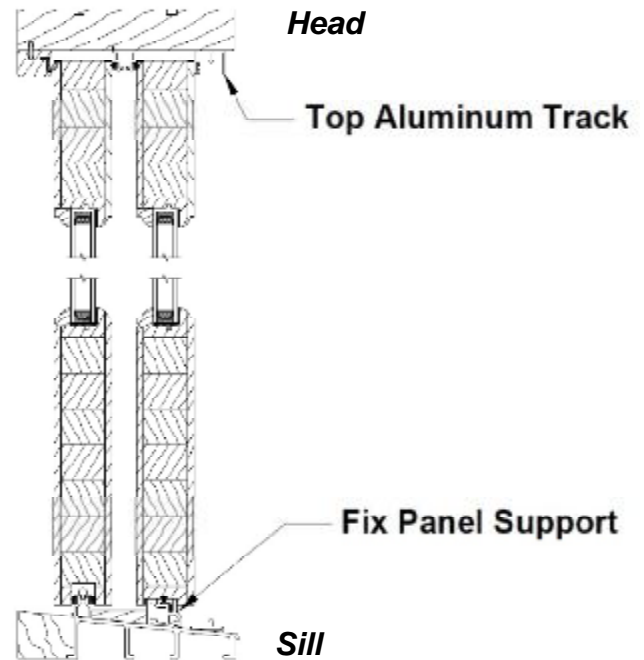

PAY CLOSE ATTENTION that the sill is straight and not curved.

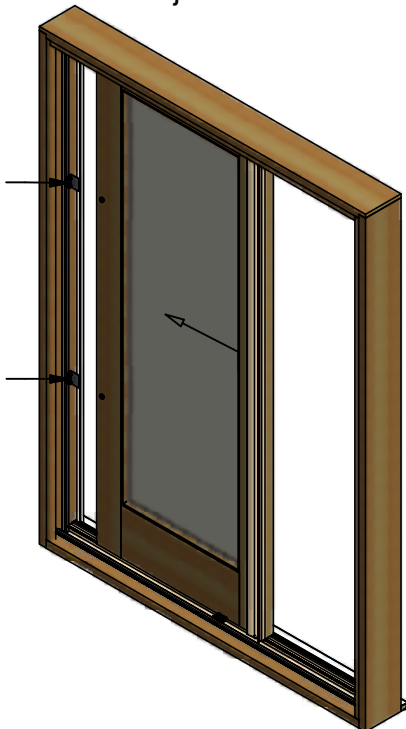

Step # 2

- Remove the top aluminum track
- Support the bottom of the fixed panel on top of the fix panel support and flip the panel up vertically into the head jamb.
- Re-install the top track.

Step # 3

When the door is in place, slide it towards the set squares. Make sure that the panel is leaning properly against the jambs.

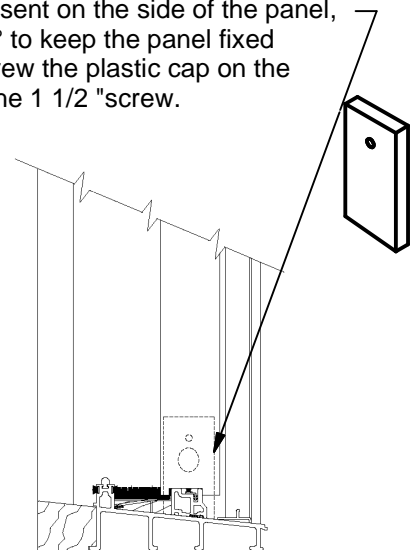

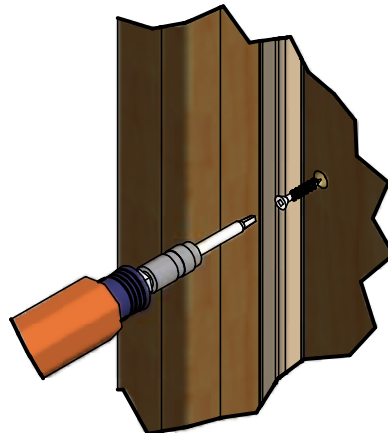

Step # 4

To fix the panel, insert the screws in the holes situated inside the sash. Then place the caps.

If pre-drilled hole is present on the side of the panel, put the 3" screw at 45 ° to keep the panel fixed on threshold. Then, screw the plastic cap on the side of the panel with the 1 1/2 "screw.

Panel Installation instruction on Sliding Door (Wood Collection)

Step # 5
Remove the interior
head moulding

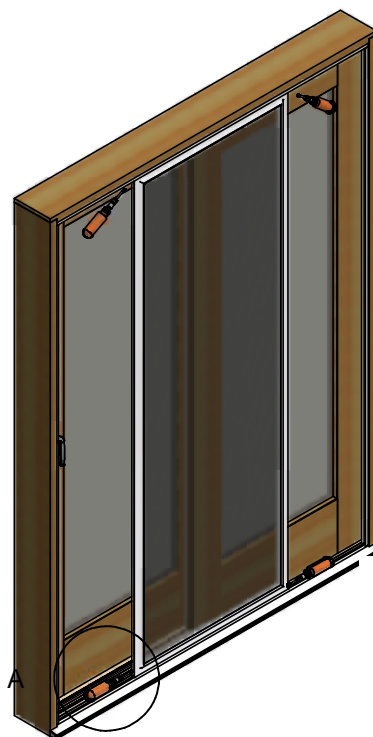

Step # 6
Insert the opening panel in the
interior track, then flip the top
sash in place to install the
head moulding.
